Still winter...in the Northern and Western Hemispheres with just a few hints of Spring's arrival. To our friends in the Middle East, Africa, the Southern Hemisphere basking in relative warmth, you are our envy!!

Bahrain, Dubai, Kuwait, Oman, Qatar and Saudi Arabia are at the height of their racing season. Elsewhere harsh winters may permit some animal owners to participate in the Middle East excitement, but generally their horses etc. are confined to more time in the stable.

Wherever one lives, however, he or she always has eyes and ears alert for that "miracle product" guaranteed to make the difference in one or more races. All sorts of factors contribute to that success:

- 1-general good health due to balanced feeding/nutrition of the animal
- 2-reduction of whatever may result in pain or strain
- 3-elimination of any insufficiency or irritation experienced by the animal
- 4-administration of a product which can boost the animal's energy during the race

Now, let's look at products which diminish or eliminate pain . Here, we find two main groups:

- **Products for Internal Use**

- NSAID: Aspirin, Banamine, Naproxen, etc
- Corticosteroids: Betamethasone, Dexamethasone, Methylprednisolone, Prednisolone, Triamcinolone
- Nutraceuticals: MSM, Devil's Claw
