

INTERMEDXP

Hoping this finds everyone out of the gates and off to a good start this January 2013! Among our New Year resolutions is to keep you abreast of modifications in regulations around the world.

Let us begin by noting that a few such regulations regarding import rules in the GULF REGION have recently changed.

There is now an Export/Health certificate required in the UAE for any imports of animal feed supplements.

Also Qatar has now made it mandatory for all imported general goods, to have clear marking of their “place of manufacture”.

In practical terms, this means that we are going experience some delays in exports or rejections of the products that do not meet those requirements.

FEI (Federation of Equestrian International) continues to expand its list of banned and restricted products. **In that respect, *Pitcher Plant Extract* has been added to the Restricted Products List.**

Among new products we invite you to look at:

- 1. EquiOtic-Paste Live Equine Cultured Bacteria (Equine Lactobacillus reuteri)**
Natural enemy of Salmonella, Rota-Virus, Clostridium and other Pathogens
Modulates GI Immune Response
Normalizes Intestinal Flora, pH and Acidity.
- 2. BANIXX- Horse Journal's Product of the Year**

An anti-bacterial and anti-fungal product for wound and hoof care suitable for a large variety of animals exhibiting hot spots, ear fungus, skin irritations and infections. This includes rain rot, punctures, white-line, thrust, scratches and more.

UPCOMING EVENTS: **DUBAI WORLD CUP RACE HORSE, UAE**

March 26, 2013 and the following days. PLEASE NOTE that among INTERMED XP's Ancillary Services you will find labeling and packaging for private label products and others.

As always, we wish you the best for a successful, prosperous racing season!
