

Perspirade®

Non-sweater? Try Perspirade today.

New Breakthrough Chinese herbal formula for Anhydrosis

Perspirade is a unique herbal formula designed to support normal production of body fluids (sweat) that help cool the body and restore normal internal balance for horses with anhydrosis (non-sweaters). This proven formula, exclusive to Perspirade, provides support for horses in high temperature, high humidity environments.

Various studies have shown that as many as 25% of exercising horses can be anhidrotic to some degree. Horses

that lose the ability to dissipate body heat through sweat can not only lose valuable energy for performance, but can also develop high heart rates and hyperthermia.

Because horses can gradually become anhidrotic, it is important to identify the symptoms as early as possible and implement an effective management program by including Perspirade as part of your daily feeding regimen.

Directions for Use:

- Administration is based on weight of your horse. Administer 1 to 1.5 grams for every 150 lbs of body weight split into two daily doses - one in the a.m. and one in the p.m.
