

Technical Fact Sheet

Product: **Excaliber**

Packaging: 56.8 gm powder / pkt . . . 30 pkts / box

Ingredients: Creatine (Kre-Alkalyn®) (20,000 mg / pkt), L-Arginine (350 mg / pkt), L-Carnitine (220 mg / pkt), L-Carnosine (175 mg / pkt), α-Lipoic Acid (250 mg / pkt), Sugar complex (carrier).

Directions for Use: Give one (1) packet on the day before a race or event and one (1) packet 4-6 hours pre-event.

Features: Numerous studies have shown that supplementing with creatine can reduce the onset of fatigue, increase cellular energy and protein synthesis at the cellular level. This has been especially true in vegetarian athletes. Raw meat is the most readily available source of natural creatine. As horses consume a vegetable based diet, it stands to reason that they could benefit from supplemental sources. **EXCALIBER** is the latest performance enhancing nutritional supplement that helps your horse perform to its genetic potential. By combining a newly patented form of creatine with essential amino acids, **EXCALIBER** is now the benchmark of supplements. Kre-Alkalyn® has shown to be **TEN TIMES MORE EFFECTIVE** than traditional creatine sources and does not produce the "upset or sour stomach syndrome" that occurs with some products.
